

Allocate SlapOS instances

by [SlapOS Team](#).

▼ Details

Web Request (1)

▼ Details

If you don't have a Vifib account yet, Register to <http://www.slapos.org>. Then go to "My Space" -> "My Services".

Web Request (2)

▼ Details

Click on "New service".

Web Request (3)

▼ Details

Select the "Wordpress" service.

Then click on the Order button.

Web Request (4)

▼ Details

Choose the latest stable version of the software, which should be in the slapos-0.xxx format (you need to have installed the same Wordpress slapos-0.xxx Software Release if you want to deploy instances of it on your computer.).

Click Order

Web Request (5)

▼ Details

You can choose the different parameters of your instance, the computer on which you want the instance in particular(if you don't want it on the public cloud, which would require paying for hosting).

Click on Request when you are done.

Web Request (6)

▼ Details

You can see your instance being deployed. Reload to have up-to-date informations.

Web Request (7)

▼ Details

Your instance is ready. All the needed informations can be found in the "Connection" parameters.

Check out your new Wordpress

▼ Details

Open the url of the frontend with your browser, and you should get the same page.

Next Steps

How to Contribute?

- Request an instance from the command-line
- Request an instance from the console API
- Add your software to SlapOS
