How can I create the category configuration spreadsheet ?

▼ Details

The category configuration for ERP5 is done through a spreadsheet. The last question in the questionnaire is to upload the created spreadsheet. Later, if the implementation field wants to use ERP5 they can just import the spreadsheet, using a special ERP5 functionality and so use a preconfigured ERP5 for their business. You can learn how to fill out the spreadsheet in the tutorial [How to fill the Category Spreadsheet](#) tutorial. To create the spreadsheet, you use the [Spreadsheet Template](#). To fill the spreadsheet, select *Download -> ODF Spreadsheet* and fill it for example with Libre Offfice. To see how such a spreadsheet can look like, we provide you an [Evaluation Spreadsheet Sample](#).
